

Chapter 4: Interaction and Building Connections

From Reply Relationships to the Art of Real Visibility

In the world of Crypto Twitter, content is only half the path to growth; the other half is intelligent interaction the place where you transform from an ordinary account into a part of the ecosystem

Interaction in CT is not just liking or replying; it is a skill. You must learn how to speak, where to show up, and with what energy to be present.

1 .Replies: The Entry Point to the Flow

Replying is the simplest and most effective way to attract attention. But the key is that you shouldn't just "give an opinion"; you must add value.

For instance, under a tweet about DeFi, don't write:

"Cool".

Instead, write:

"Exactly. Most people forget that real yield comes from real usage, not hype".

Or under a funny meme, write:

"Still bullish tho".

**The goal is not to get attention from the author
but for the followers of that post to feel your vibe**

2 .Quote Tweet: Your Personal Signature on Others' Content

When you see a post of value, Quote Tweet it and add your own view. This allows you to participate in the conversation while creating original content.

Example

Post: Web3 is not just tech it's culture

Quote: And culture doesn't die, it evolves. That's why I'm here

- ❖ **Note: Always maintain a positive tone with positive thoughts. CT does not deal well with negative energy; it rewards a high vibe**

3 .DMs: Starting Real Collaborations and Friendships

DMs are not for spam; they are for relationship building. Before sending a message, interact publicly with that person for a few days (like, reply, quote). Then, in the DM, introduce yourself and get straight to the point, respectfully and briefly:

`Hey, I've been following your work around Base. Love your consistency. I'd like to collaborate on something related to content or community building`.

Most real connections in CT start from these simple conversations.

4 .Engagement Circle

One of the oldest but most effective tactics for organic growth: A group of 5 to 10 people with a similar vibe who reply to and quote tweet each other's posts.

But be careful

- Only be with people whose content you genuinely like.
- Interaction should not feel forced.
- The goal is to strengthen the collective vibe, not manipulate the algorithm.

If built correctly, this circle transforms into a real digital family.

5 .Twitter Lists (X Lists)

An underrated but powerful tool. Create lists to categorize important people:

- Builders
- Artists
- DeFi Degens
- InfoFi Researchers

Read the feed from those lists daily and interact strategically. Over time, you will appear as a familiar and active face in that group.

6 .What is a Twitter Space?

1. Space is essentially a live audio chatroom like a live podcast, but within Twitter (X)

Anyone can:

- Join and listen.
- Request to be a speaker.
- Start their own Space.

You can instantly talk about a specific topic like DeFi, Base, NFT, or market analysis with hundreds or even thousands of people.

2 .The Role of Spaces in Crypto Twitter (CT)

In CT, Spaces are not just for chatting; they are a core part of the community culture:

- Project Introductions (e.g., a new project on Base introduces itself).
- Expert Discussions (about Layer 2s, Airdrops, security, economics).
- Live Learning and Education (Blockchain analysis, NFT, trading).
- Networking Opportunities.
- Building credibility and trust (being recognized by voice, not just text).

In fact, many Web3 working relationships and collaborations start from these Spaces.

3 .How to Find Good Spaces

To start:

- Go to the Spaces tab on Twitter (microphone icon at the top or bottom of the screen).
- Or use search with keywords like:
 - DeFiSpace
 - BaseSpace
 - CT Space
 - Crypto Roundtable
 - NFT Talk
- Follow some famous hosts so you get notified about their next Spaces.

Some Famous Hosts (For a Safe Start) :

- Mario Nawfal (@MarioNawfal) – Large daily news Spaces.
- buildonbase (@BuildOnBase) – Spaces related to Base.
- Nabu (@nabu_lines) – Meme-style with major crypto and Web3 culture figures.
- Farokh (@farokh) – Platforms, NFT, and Web3 culture.

4 .When You Are New: How to Behave in a Space

Before you speak, listen more. Spaces have their own distinct cultures sometimes chill and fun, sometimes very serious and analytical.

Professional Conduct :

- Join on time (the beginning of the Space is usually for introductions).
- Don't interrupt someone while they are speaking.
- If you are brought up (as a speaker), only speak when you genuinely have a point to add.
- Always thank the host and speakers (even briefly).
- Don't be afraid of accent or mistakes in English; honesty and positive vibe matter most.

5 .How to Request to Speak

When you enter a Space:

- Press the "Request to speak" button.
- Wait for the host's approval.
- Once approved, the microphone icon at the bottom left will activate.

Pro Tip: If it's your first time, practice a short introductory sentence before the Space starts.

Example: `Hey everyone, I'm Orin designer and crypto content creator from the Base community. Excited to be here and learn more about the topic`.

It's simple, natural, and shows you are interactive and respectful.

6 .How to Use Spaces for Growth

- 1 .Tweet After the Space: Post a short tweet like: `Loved the energy in today's BaseSpace. Great insights from @BuildOnBase & @X. Community keeps growing strong.` This causes speakers to like and reply, pulling you into their network.
- 2 .Summarize Space Takeaways Write an educational thread or summary of the Space, e.g.: `Top 3 takeaways from today's DeFi Space: 1. On-chain data > narratives 2. Layer2 competition just started 3. Builders always win. Hosted by @BanklessHQ.` This provides value and establishes you as a professional.
- 3 .Interact with Speakers: Reply, Quote Tweet, and after several interactions, you might naturally be invited up in future Spaces.

7 .What NOT to Do

- Interrupting mid-speech is considered disrespectful.
- Leaving a Space while you yourself are speaking.
- Using a Space for baseless shilling or promotion.
- Having environmental noise or music playing (keep your mic muted until it's your turn).
- Speaking repeatedly or aimlessly.
- Mass Follow/Unfollow after a Space interaction must be genuine, not numerical.

8 .When You Are Ready: Host Your Own Space

Prerequisites: At least 2–3 weeks of real interaction and 20–50 relevant followers.

Choose a simple topic, such as:

- What is Base and why it matters for new builders ?
- Let's talk about DeFi security for beginners
- Web3 design + storytelling = the next wave ?

Pro Suggestion: Co-host the Space with 1 or 2 other people.

Your followers will come, and so will theirs.

Summary (Mini Checklist for Growth in Spaces)

➤ Stage ➤ Goal ➤ Action

1. Listening Listen to 5 Spaces per week, each for at least 30 minutes
2. Interaction Post 1 tweet after every Space
3. Participation Request to speak 2 times per week.
4. Credibility Building Summarize Spaces in thread forma
5. Hosting In the second month, host your first Space with a friend

Now let's move to one of the most important tools for growth in CT: Conversation in Crypto Spaces in English. This guide is for those who want to speak in international crypto Spaces without stress, using simple and professional English. I have written this step-by-step for you, from beginning to closing remarks.

Complete Guide to Speaking in Crypto Spaces (Crypto Space English Guide)

1 .Starting to Speak Introduce Yourself

When the host tells you: `Hey Orin, welcome up! Wanna introduce yourself`?

Don't drag it out. A 10-second introduction is enough.

Example 1 (Simple and Natural):

`Hey everyone, I'm Orin—architect, designer, and developer, and a crypto content creator. I'm part of the Base community and I love talking about Web3 design and onchain vibes`.

Example 2 (For More Professional Settings) :

Hi guys, I'm Orin. I design visuals and content for crypto projects, mostly around Base and DeFi. Excited to join this space and share some thoughts

❖ **Note: Name, area of work, your community and positive tone always include these four in your introduction**

2 .Continuing the Discussion – Sharing Thoughts or Opinions

When discussing a topic, the following structure works great (even for native speakers):

1 .Small intro → 2. Main point → 3. Short example → 4. Wrap up
